

How to build a Level and firm ground economically, quickly and effectively have been a subject in construction industry for a long time Self-leveling Mortar with hpmc powder will be the new solution for this subject,

Self-leveling mortar is a special dry-mix mortar product with self-leveling and self-compacting functions, 400 cps hpmc cellulose powder strengthen the self-leveling and self compacting ability to achieve a smooth and seamless ground layer

A good self-leveling product need both proper operating performance and certain degree of strength, cellulose ether play a such important role in self-leveling mortar, [Hydroxypropylmethyl cellulose](#) with 400cps could effectively suspend the coarse aggregate in the mortar to ensure the fluidity and operation times, reduce the shrinkage of the mortar, reduce the water bleeding, and improve wear resistance

#### Advantage

400cps [hpmc cellulose](#) ether products can

Ensure the fluidity of self-leveling mortar;

Improve the self-healing ability

Effective helps to form a smooth surface;

Reduce shrinkage and increase bearing capacity;

Improve the adhesion and cohesion of the self-leveling mortar
