

Product description

[China Redispersible polymer powder \(supplier\)](#) is one of the most important construction chemicals grade polymer. RDP polymer is mainly used in all kinds of dry powders materials such as the cement-based, gypsum-based, putty powder and other dry powder materials as a binder.

Advantages

Improves adhesion, flexural strength,

Abrasion resistance and workability.

High flexibility and Good bond strength

Outstanding water resistance

Increased elasticity of the mortar and long open time

Gives the mortar excellent alkali resistance

Application

[China RDP polymer \(factory\)](#) is widely used in plasters, tile adhesives and mortars, also used in flexible thin layer mortars and cement mortars.
